40. Raise Debt Limit - Modified Experiment Wording

To avoid defaulting on America's past loans — and potentially triggering a global financial crash that could cost millions of U.S. jobs and trillions in stock market losses — Congress must soon raise the debt limit just as bipartisan majorities have routinely done for the last century. Do you favor or oppose raising the U.S. debt limit?

Asked of the other half of respondents randomly selected

49. Trump Crimes Change Opinion of Trump
Donald Trump was recently indicted for paying hush money to a porn star and found liable by a jury for sexual abuse and defamation. Several criminal investigations into Trump's attempts to overturn the 2020 election and his refusal to return highly classified documents are ongoing. Do these cases make you feel any differently about Donald Trump or is your opinion of him the same as it's always been?

Yahoo! News Poll

YouGov

Sample	1,520 U.S. Adults
Conducted	May 25 – 30, 2023
Margin of Error	$\pm 2.7\%$

Polling Methodology and Margin of Error Calculation

The Yahoo! News survey was conducted by YouGov using a nationally representative sample of 1,520 U.S. adults interviewed online between May 25 – 30, 2023.

The sample was weighted according to gender, age, race, education, 2020 election turnout and Presidential vote, baseline party identification, and current voter registration status. Demographic weighting targets come from the 2019 American Community Survey. Baseline party identification is the respondent's most recent answer given prior to November 1, 2022, and is weighted to the estimated distribution at that time (33% Democratic, 27% Republican). Respondents were selected from YouGov's opt-in panel to be representative of all U.S. adults. The weights range from 0.2 to 3.1, with a mean of 1 and a standard deviation of 0.4.

The *margin of error* (a 95% confidence interval) for a sample percentage p based upon the entire sample is approximately 2.7%. It is calculated using the formula

$$\hat{p} \pm 100 \times \sqrt{\frac{1 + \mathrm{CV}^2}{n}}$$

where CV is the coefficient of variation of the sample weights and n is the sample size used to compute the proportion. This is a measure of sampling error (the average of all estimates obtained using the same sample selection and weighting procedures repeatedly). The sample estimate should differ from its expected value by less than margin of error in 95 percent of all samples. It does not reflect non-sampling errors, including potential selection bias in panel participation or in response to a particular survey.
