

2022 Monkeypox Surveillance Data

The data in this report reflect events and activities through July 13, 2022, at 1 p.m. Eastern time. All data collected after that point are not included in this report. All data in this report are preliminary and subject to change as the cases represented within are actively being investigated. The data includes probable and confirmed cases in New York City (NYC) residents.

NYC Monkeypox Total Case Summary

	Cumulative
Total	336 (100.0%)
Age	
Median Age (range)	35 (20 to 69 years)
Unknown ²	0 (0.0%)
Gender¹	
Men	321 (95.5%)
Women	0 (0.0%)
TGNCNB	7 (2.1%)
Unknown ²	8 (2.4%)

Unknown ²	119 (35.4%)

¹Includes the following gender categories: men; women; transgender, gender nonconforming and nonbinary (TGNCNB). People whose current gender identity differs from their sex assigned at birth are considered TGNCNB. Sex and gender information are collected from people's self-reports, diagnosing providers or electronic lab reporting. This information may or may not reflect the individual's self-identification.

²Unknown due to missing or pending case investigation.

³Sexual Orientation and Race/Ethnicity: Numbers in the "Unknown" category are high due to pending case investigations needed to gather these data.

Confirmed and Probable Monkeypox Cases by Day of Diagnosis*

*Due to the time required to collect, test and report, recent data may be incomplete. The data in this graph reflect events and activities through July 13, 2022, at 1 p.m. Eastern time.
